

SR²Food - Food Distribution Software

Core System Features

SR²Software is committed to our small and medium-sized food distribution, wholesale, and trader/broker customers in all aspects of food distribution software and support. We hang our collective hat on not only providing the best food distribution solution on the market, but also providing impeccable customer support.

> **FAST AND EASY SALES AND PURCHASES ENTRY**

Enter an order into SR²Food Sales Order or Purchase Order entry screens in less than 30 seconds using our hands-on keyboard entry method. No having to move between the keyboard and the mouse over and over. Enhanced by our Rapid-Intelligent search you can bring up Customer, Vendor or Item information using one or more partial words, or just by entering the ID's.

> **ORDER HISTORY GUIDES**

Powerful Order History Guide allows user to order from past buying history of the Customer or purchase history from your Vendors. Complete with filtering capabilities so you can narrow the focus to a few items. You also get editing abilities so you can add or remove items in a customer's order history guide.

> **CATCH WEIGHT MANAGEMENT**

Catch the weight of items before your shipments go out the door, recording accurate weights of each item sold and showing them on the customer's invoice. Barcode integration helps to speed the weight capture process and eliminate keying errors.

> **BUY SHEETS**

Once your Sales Orders are entered you can generate a Buy Sheet, showing what Inventory is needed to fill orders. Sort by Category, Vendor or Item. Factor in existing inventory so you don't buy what you already have. Complete with options to create a worksheet of the items needed to be ordered, which can be edited and used to automatically create Purchase Orders.

> **CUSTOMERS**

Complete customer management capabilities, including general information, contact information, credit information and truck routing information. You can even setup customer's special pricing on a category of products or on one or more individual items. Ability to run statements, view open A/R and create recurring orders for customers.

> **ITEMS & ITEM LOCATIONS**

Complete inventory item management capabilities, including general information, costing and pricing information. You can also setup item special pricing for multiple customers.

> **MULTIPLE UNITS OF MEASURE**

Buy and Sell items in multiple Units of Measure. Buying Units, Selling Units, Alternate Units and second Alternate Units allow items to be sold by the CASE, broken CASE and/or WEIGHT. Inventory becomes a pleasure to manage because you only have one item record per product.

> **CATEGORIES**

Break your products up into categories and see your gross profit on sales by product or product line

> **TRUCK ROUTING**

Drag-and-Drop capabilities to visually setup deliveries by route and stop. Quickly and easily move orders from truck to truck or stop to stop. With the MapPoint Module truck routing is interfaced with Microsoft's MapPoint and automatically orders your stops. Then just print your Pick tickets, Invoices and Manifests by truck route.

> **BATCH PICK REPORT**

Your warehouse personnel will be more efficient with the Batch Pick Report. They can see all the items that need to be picked on one report, unlike individual pick tickets. With features that allow sorting by truck route and warehouse location.

> **CALL SHEETS FOR SALESPEOPLE**

Your Sales people will love the Call Sheets, complete with Customer contact information and past order history, including the current price for the customer. Call Sheets can be configured to print on preset days and for preset times.

> **TRACK SALES ORDERS THROUGH ENTRY, PICKING, AND INVOICING**

Easily manage all of your daily business activities and insure that all your orders are accurate when the customers receive them, increasing customer satisfaction. Also audit reports to see what was done to each order and by whom.

> **ACCOUNTING**

SR²Food is seamlessly integrated with QuickBooks accounting software for state of the art accounting capabilities. All transactions flow to QuickBooks in detail allowing you to perform day to day tasks like payment receipts, statements, bill payments and deposits. QuickBooks reporting allows you to see your A/R and A/P aging, financial position and much more.

SR²Food - Food Distribution Software
Core System Features

> **LOT CONTROL**

SR²Food provides extensive lot tracking capabilities to facilitate complete and flexible lot tracing. Lots can be traced from source to destination or vice versa. Lot information can include country of origin, pack dates, expiration dates, fresh or frozen designation and external lot numbers. Flexible lot selection allows you the ability to direct your warehouse personnel to pick from specific lots or allow them to pick the lot and capture lot information at shipment time.

> **LOT CONTROL & TRACKING FEATURES**

- Lot Inquiry screen showing lots by Warehouse with automatic refresh, filtering capabilities and drill down features
- Auto lot selection using FIFO principles in Sales Order Entry
- Lots by Warehouse
- External Lot numbers (whether created by manufacturer, outside warehouse or yourself)
- Pack dates & expiration dates
- Fresh or Frozen product designation
- Country of Origin Labeling (COOL)
- Lot transfers (either within the same warehouse or between warehouses)
- Physical inventory by Lot
- Lot capabilities in Production and Recipes modules

> **LOT CONTROL & TRACKING FEATURES**

- Complete Lot History
- Lot tracking through the buying, selling and shipping processes
- Options to show / hide lot information on invoices
- Directed lot picking or free picking ability
- Lot costing report to see profits by individual lots

> **MULTIPLE WAREHOUSES**

SR²Food handles the tracking of inventory in multiple warehouses, including 3rd party cold storage facilities. SR²Food comes complete with warehouse inventory stock status and valuation reports for accurate and instantaneous information about the products you have available to sell. You will always know where your products are and the value of your inventory by warehouse. Fast and easy warehouse transfers of product with full lot tracking.

> **WAREHOUSE FEATURES**

- Ship from multiple warehouses
- Warehouse release documents
- Ability to assign ship via by warehouse
- Trucking release documents
- Multiple inventory reports by warehouse
- Complete physical inventory by warehouse
- Transfer product between Warehouses

SR²Food - Food Distribution Software

Barcoding Module

> **BARCODING**

Streamline the picking, shipping and receiving areas within your organization using our barcoding module. Eliminate costly and timely manual recording errors by deploying state of the art technology.

> **ORDER CONFIRMATION**

Confirm orders as they leave the building with accurate data. Just aim and pull the trigger on the barcode reader and all the information is automatically entered into the confirmation screen. Order confirmation can guide you through the items on the order or you can randomly read them. Using the item density and weight we can even help you efficiently load your pallets, eliminating costly errors when goods get damage due to improper stacking order. Visual colors guide the user as the items are confirmed. Scale integration for weight capture on broken items during order confirmation. You can even short ship items where inventory wasn't available.

> **ROUTE ORDER CONFIRMATION**

Confirm all the orders for a route from one screen. Orders are called in reverse stop order as you go through the order confirmation process. Visual colors aid the user to highlight potential errors or incomplete orders.

> **ITEM LABELS**

Print your own item labels when they don't exist on products. Completely integrated with industry standard 'legal for trade' scales to capture weights on individual products, cases, and even items you produce. Barcode label printing is quick and easy with our one step process.

> **CATCH WEIGHTS IN SALES ORDERS**

You can even capture catch weight through individual sales orders. Don't worry if you get a damaged or unreadable label, keyboard overrides allow you to manually enter confirmation quantities and weights on the fly.

> **PURCHASE ORDER RECEIVING**

Capture product purchases as they enter your building, speeding up the inventory update process. Receive accurate weights and quantities eliminating the need to manually enter purchased product receiving information.

> **MOBILE HANDHELD PICKING**

You can even capture weights with a computerized mobile handheld device. Don't worry if you get a damaged or unreadable label, device overrides allow you to manually enter confirmation quantities and weights on the fly.

... MANUFACTURING MODULE

> MANUFACTURING

If you manufacture a product, then our Manufacturing Module will give you the ability to manage your production. From costing of the finished product to inventory raw goods depletion and inventory finished goods replenishment. Complete with manufacturing order slips that calculate needed raw goods for the production quantity.

> RECIPE MAINTENANCE

Create your recipes for the manufactured finished good based upon a standard yield. Manage the raw products that make up the finished good, including packaging materials. Include labor and overhead cost to get an accurate finished goods cost.

> RECIPE ORDERS

Create recipe orders for production of the finished goods. We calculate all the needed quantities of the ingredients and products based upon the standard recipe you setup. No more mistakes on quantity calculations for the desired output. Accurate inventory deductions of raw goods and additions of finished products based upon the manufacturing updates of finished goods.

> REPORTING

Inventory reports showing all the information about the finished good, with or without labor calculations included. See the status of your inventory stock and the valuation of the finished product.
